Subject: Where is "Error Log"?

Folks,

After customizing my IDL Workbench (and getting no errors), I was told I would have to restart the Workbench for changes to take effect. When I do so, the Workbench starts up with several errors. I get the message that "Multiple errors have occurred. See error log for more details. java.lang.NullPointerException".

Where is this "error log" the Workbench speaks of?

Cheers,

David
