Dear guys:

Why cannot IDL7.0 create widget with chinese characters, such as:

```
IDL> base = WIDGET_BASE()
IDL> bgroup = CW_BGROUP(base, values, /COLUMN)
IDL> WIDGET_CONTROL, base, /REALIZE
```

which is ok with IDL 6.4.

Thanks!

Problem solved:

window->preferences->general->content types->Text-> add file
associations: *.pro, change "Default encoding" to GBK, hit "Update"
