ok that is answered in the thread

Another question:

I like to control the standalone web server included, any ideas?

I've added a couple of articles on this topic to my web page this morning, collecting the collective wisdom of this group:

<http://www.dfanning.com/workbench/addtoeclipse.html>
<http://www.dfanning.com/workbench/otherlang.html>

As we accumulate experience, I'll be updating the pages.
I recommend you send all your updates here. I'll probably
see them. :-)

Cheers,

David

Are administrator rights required to update Eclipse/IDL Workbench on any platform? I currently run as administrator on my windows machine (which is the standard configuration for a few more weeks) so I haven't run into this.

Changes in how US federal civilian IT systems are managed will require an update mechanism (if provided w/in the application) that can be run as a standard user. Waivers for applications failing to meet this criteria will be granted in the short term (even MS office fails at this right now). Longer term, vendors will have to change their applications or face issues selling to US Federal agencies.

On a related note, has any .gov users tried running the last few versions of IDL under the FDCC? Any problems? We're in the early stages of rolling out FDCC and I will be setting up a machine next month to test the various applications used by our group (IDL being one).

Yes you do need root/administrator rights. On linux you don't have write access as user on the file location of installed programs.

Hi

I recognized a workbench dir on linux in the dialog can easily get
blanks at the end of the dirname. You have to trim yourself the dirname.

Category:Useability

cheers

I think, but am not certain, that individual users can install their own upgrades to Eclipse. These will be personal, and installed into their own home area, overriding the default system version. For a system-wide upgrade you do need to be root (or whichever user installed IDL/Eclipse, but I think it insists on root).

Can you elaborate a bit more on this. I'm not quite sure
what you are reporting. Thanks.

Cheers,

David

hmm, it seems to be possible to install a patch as user but after
restarting the workbench I get the same updates offered again.
So I am not sure too if it has worked.

But on a multiuser system I would prefer a system-wide upgrade with a
different non X related eclipse update

cheers

can't reproduce it. It happens as I tried to load a program into the
workbench doing idlde program.pro

cheers
