Dear all,

I would like to plot a contour line figure, filled with colors.
Thereby, positive values should be red-shaded filled, negative blue-shaded filled, and white shade around the zero.

Now, I have checked the color table in IDL, and none of them seems to have this configuration? If possible, I would like to define the colors myself in fixed intervals, like $[-10,0]$ = light grey, $[0]$ = white, $[0,10]$ = darkgrey,.... $[10,20]$ = light red,

Hope somebody can help me with this!

Cheers,
Matthias
