Hi,

I am trying to output a ps file with 8 plots per page and several pages. However, my program only make one plot and then go to a new page. My program looks something like this:

```
SET_PLOT, 'ps'  
DEVICE, /landscape, xsize=25, ysize=18, yoffset=28.5  
LOADCT, 13  
DEVICE, /color, bits=8  
!P.FONT=0  
DEVICE, filename='output.ps'  
!P.MULTI=[0,2,4]
```

```
FOR...    loop, where I open each data file...  
Contour procedure  
ENDFOR  
DEVICE, /CLOSE
```

Thanks,
Kim
