I found a thread from 2000 (http://groups.google.com/group/comp.lang.idl-pvwave/browse_thread/thread/3ad3177a461ebf7/e61416078b522c60?lnk=gst&q=xyouts+vertical+alignment) about this. Someone asked about whether maybe there was a VALIGN keyword for XYOUTS, and David told them they were out of luck. Eight years and several revisions later, no change?

From a technical standpoint, I don't see how this is any more difficult than aligning text horizontally. But that doesn't mean I want to do it myself.
