Hi,

Now, I am learning IDL programming.

I have a model minimum temperature fraction values with longitude latitudinally, I am planning to plot on globe map with longitude and latitudinally.

The data sets are like this

```
longitude=float(65)
```

```
latitude=float(32)
```

```
temp_fra=float(65,32)
```

These temp_frac values are in between 0.01 to 0.9.

How to plot these values global map.it might be same as image on global map.

If anybody knows how to plot longitude/latitude values on global map and try to suggest me.

I am awaiting for your reply,

Kishore
