Help, I've got this problem. The cursor keys don't work for me when I'm using PV-WAVE CL v5.0 on DEC ALPHA 3000 workstation OSF/1 v3.0. Has anyone any idea why this might be so and the fix. I usually run PV-WAVE CL in a DECTERM window, but I can also run an Xterm.

The problem might be to do with the keyboard, or the Keyboard setup. The keyboard is an LK401-AA revision number A06. I also have a feeling it's something to do with PV-WAVE CL on the DEC Alpha Station because we have DECstations running ULTRIX here and I've run WAVE CL on that & it's ok. But if I rlogin to an ALPHA station & run wave, then the cursor keys don't work. Strangely enough when I rlogin to a DECstation running ULTRIX, the cursor keys don't work.

Any suggestions?

John Black.
