All, as there are a number of space and other magnetic folks out there, does anyone have a convenient IGRF (international geomagnetic reference field) code for IDL. At one point I had a dlm but have switched to mac and can't seem to find it again, and by convenient I am hoping it is rewritten in IDL native. But I'll take anything. This is probably a problem of me typing the wrong things into google.

Anyone?

Cheers,

Brian
