Hi people,

In my interface I combine Direct Graphics (plots on WIDGET_DRAWs) and
Graphic Objects (IDLgrImages and IDLgrPlots). When I want to export my
view to PS file I have a problem.
I export the view using IDLgrClipboard:

self.clipboard->SetProperty, DIMENSIONS=dimensions, UNITS=2
self.clipboard->Draw, self.oView, /POSTSCRIPT, /VECTOR,
FILENAME=filename

Then I change the DEVICE to PS and I plot in the same file:

SET_PLOT,'ps'
DEVICE, FILENAME=filename, /COLOR, /HELVETICA, XSIZE=dimensions[0],
YSIZE=dimensions[1]

When I do that the final file is the last that I painted.

Is it possible to export a View with Graphic Objects and Direct
Graphics in the same file ???? Any suggestions?
