Folks,

I am **absolutely** confused about IDL paths this morning.
Does the IDL Workbench save the !PATH at the end of the
day and restore it in the morning!?

I have NO startup file defined for my Workbench. I have
turned off the Update Path Preference option for my
projects, and they are **still** showing up on my path!!

Do I have to reinstall IDL to get back to square one?

Is anyone else having these kinds of path problems?
I was starting to believe I understood IDL a little bit,
but...now I'm baffled. :-(

Cheers,

David

P.S. I'm not a particularly religious person, but I'm
beginning to believe in demons.
