Folks,

Here is something for the How-Come-I-Never-Saw-That-Before?
file.

One of the things that has annoyed me about the Workbench is
that I am never sure where the file I am editing has come from.
Is this the Coyote project version of the file, or my client
version of the file?

But I was just sitting here, thinking, staring into space
and idling clicking on the editor tabs when I realized that
for whatever file I am editing, its complete path name
appears in the window title bar of the Workbench. Duh...

OK, one problem solved. It's already shaping up to be
a fine day!

Cheers,

David

What!? Vindication?

Cheers,

David
