by the way I resolved the xprinter error just by setting up the XPPATH environment variable, but as I expected it did not solve the whole problem.

Well, for those who are interested by this issue, we have just resolved the problem for one machine.

My sys admin did an update of java from 5.0.10 to 5.0.14 and an upgrade to java 6.0.0.

We have tested it, first with java 6 and it worked. And we tried again with java 5 (updated) and it worked.

We kept testing, on other machines with more basic installs, with java 5.0.14 and java 6.0.0 and it did not worked.

So we are trying to find which packages made it working on this machine and not on other machines.... Strange things....
