Hai Everyone,
            I hope somebody will sort out my problem.
I have procurred ASTER L1A data. As it is a raw data format, i have to
register it both radiometrically and geometrically. I'm using ENVI4.4
version.
My questions :
1. Can we directly import the DNvalues of image in to radiance in
ENVI.
2. Is destaggering is necessary for SWIR AND TIR data?

Pls come with some helpful answer..

Thnaks
