Dear all,

I was wondering if someone could suggest me how to specify the following ENVI information in IDL:

```
map info = {Geographic Lat/Lon, 1.0000, 1.0000, -130.54072891,  
40.00000000, 4.8112599312e-003, 4.8112599312e-003, WGS-84,  
units=Degrees}
```

I need to create lats and lons grids for the "Geographic Lat/Lon" projection and they must give me the same geolocation for each pixel as ENVI does. I am using IDL 6.3

Thanks
Robinson
