I found trouble with ENVI batch mode. For ENVI 4.1/4.2 help shown that batch mode can be tested by following commands

IDL> ENVI,/RESTORE_BASE_SAVE_FILES

IDL> ENVI_BATCH_INIT

and for testing

IDL> ENVI_SELECT

Now, in ENVI 4.4 ENVI_SELECT in this sequence not working

Error message is:

IDL> ENVI_SELECT

Variable is undefined: <No name>.

Execution halted at: WIDGET_MODAL_BASE

 ENVI_SELECT

 \$MAIN\$

Sorry about the last post, it was incomplete.

the following procedure produces no errors for me under envi 4.4:

pro temp

 envi,/restore_base_save_files

 envi_batch_init

 envi_select

 envi_batch_exit

end

Can you post the exact routine that you are having problems with?

I use it from IDL command line
not inside procedure or function
