Hi, guys,

regions.

I have a txt file with concentration data at each Lat-Lon on 1 deg resolution for world map.

I have ArcGIS 9.2 and ENVI. can i use any one of this programs to create a Geo Lat/Lon world map at 1 deg X 1 deg resolution and then some how compare these to 2 file to calculate the total concentration of each region like asia or countries like china, usa etc.. or if i could assign all the Lat/Lon according to countries or

could someone give me suggestions on how to proceed.
