Hi, I am trying to read in a long line which has around 2520 values all in scientific notation (ie 1.2E+02, etc). I tried the following:

```
x=strarr(2520)
x[*]='12345678'
readu,unit,x
```

Then converting to floating point. This doesn't seem to work since the data is in scientific notation. Does anyone have any suggestions?

Thanks,

Howard
