Subject: reading in a long line of data Posted by teich on Thu, 08 May 2008 16:18:39 GMT

Hi, I am trying to read in a long line which has around 2520 values all in scientific notation (ie 1.2E+02, etc). I tried the following:

x=strarr(2520) x[*]='12345678' readu,unit,x

Then converting to floating point. This doesn't seem to work since the data is in scientific notation. Does anyone have any suggestions?

Thanks,

Howard
