I am a total beginner with PV-Wave, and I would like to plot curves in 3-D that PV-Wave would read from a data file.

I have seen documentation on T3D, although I haven't tried it yet, but the big thing I want to do is to change the viewing position interactively by moving the mouse or doing something else simple.

Could someone please tell me whether PV-Wave can interactively change the viewing position, and, if so, how I might proceed?

Best of all, does anyone have software that they would be willing to email to me that would do some or all of what I want to do?

I am running PV-Wave on a Sun 10/41.

Thanks.
