Hi, All:

I am using lonlat2reg.pro to process my data. The code stopped somewhere and needed the program called "indgen_array". Anyone knows where I can access to it?

Thank you in advance,

```
glon = indgen_array(nlon, nlat, /lon) * dlon + lon0[0] + dlon /  
2.  
glat = indgen_array(nlon, nlat, /lat) * dlat + lat0[0] + dlat /  
2.
```

Likun~
