Subject: Multi plots per page problem

I'm having a problem producing multiple plots on a page.

I set !p.multi = [0,1,2,0,0] and expext to get one column of two plots filling the page. However only the top section (approx half) of the page is used. If I switch to lanscape mode then everything seems OK, except that the plots are the wrong shape (well not the one I wnat anyway).

This is for IDL v2.014, VMS 5.4-1 with ps output. Does anyone know waht , probably tricial, thing I'm doing wrong?

Sean.
