Hi All,

I have a linear plot that I would like to draw a polygon on top of, but still be able to see the underlying plot. Currently, the polygon is drawn on top of the existing plot, but the color is not transparent so you cannot see the data that is below the polygon. I cannot draw the polygon first and then redraw the plot using oplot (the routine to draw the plot is not mine, complex, so can't be modified to use oplot rather than plot). Any suggestions?

Thanks!

Cindy

Thanks for pointing that out - that was an old "feature" that I removed a while back. I've removed that part from the examples.

Mike
