Hi all,
This is the first time that I post on this news group and I want to
greet everyone.

I have a little problem in my IDL program. I use this progress bar

http://www.dfanning.com/widget_tips/show_progress.html

in my code and it work very well.
Now, I would use this progress bar also with CALL_EXTERNAL function,
but I don't know how to update the value of progress bar from inside
shared library.
Someone can help me?

Thank you for everything and I'm sorry for my english.
Best regards.

Mario,

Have a look in the IDL Help for WIDGET_STUB.

You can pass events back to a "dummy" IDL widget from external
programs which then get handled normally within IDL.

Cheers,

Andrew
