
Subject: Java Bridge Import

Hey ~~

So, I'm trying to re-use much existing Java code in this java->IDL rewrite process. However, it appears that I can only access Java classes if they're jar'd up. I need to be able to access class files without having to Jar them. (This is a huge application)

Here's what I mean:

For example, I have a class "HelloWorld.java" and "HelloWorld.class" in D:\IDLResearch\Bridge\

This code: `javaClass = obj_new('IDLJavaObject$HELLOWORLD', 'HelloWorld.java')` returns

```
"% Class HelloWorld.java not found
% Execution halted at: IMPORTER      3 D:\IDLResearch\Bridge
\importer.pro
%                               $MAIN$ "
```

My idljavabrc file contains: D:\IDL\Bridge\ and D:\IDLResearch\Bridge
-- I've tried it with each.

Any thoughts ??

Thanks in advance!
