---

I've been using IDL Workbench 7.0.1 with no problem until now.  
My desktop is CentOS 5.2(Upgraded from 5.1), and I usually  
upgrade suggested by the package manager.

Today I also upgraded something suggested by package manager.  
Kernel and something I cannot remember.

```
uname -a
Linux selab.kr 2.6.18-92.1.6.el5 #1 SMP Wed Jun 25 13:49:24 EDT 2008
i686 i686 i386 GNU/Linux
```

After the upgrade, I cannot start my IDL Workbench.  
The messages are,

```
JVM terminated. Exit code=1
/usr/local/itt/idl70/idlde/bin.linux.x86/jre/bin/java
-Xms40M
-Xmx256M
-jar /usr/local/itt/idl70/idlde/plugins/
org.eclipse.equinox.launcher_1.0.0.v20070606.jar
-os linux
-ws gtk
-arch x86
-showsplash
-launcher /usr/local/itt/idl70/idlde/idlde.linux.x86
-name Idlde.linux.x86
--launcher.library /usr/local/itt/idl70/idlde/plugins/
org.eclipse.equinox.launcher.gtk.linux.x86_1.0.0.v20070606/
eclipse_1020.so
-startup /usr/local/itt/idl70/idlde/plugins/
org.eclipse.equinox.launcher_1.0.0.v20070606.jar
-exitdata 40008
-vm /usr/local/itt/idl70/idlde/bin.linux.x86/jre/bin/java
-vmargs
-Xms40M
-Xmx256M
-jar /usr/local/itt/idl70/idlde/plugins/
org.eclipse.equinox.launcher_1.0.0.v20070606.jar
```

How should I fix this problem?

Thanks for reading.
