Hi there,

to me, the format code '(I03,"",I03,"",I03)' is the same as
'(I03,2("",I03))'. Not, it seems, to IDL:

```
aa = indgen(2, 3)
str_aa = string(aa, format='(I03,"",I03,"",I03)')
print, str_aa
str_aa = string(aa, format='(I03,2("",I03))')
print, str_aa
end
```

gives here on my machine

```
000,001,002 003,004,005
000,001,002 ,003,004 ,005,
```

Anybody knows why? Bug or feature?

Cheers

Lasse Clausen
