Hello,

I hope this is simple question for experienced guys.

How to find out perfect point of intersection of x value and corresponding y value.

For example:

x1=[0.1,0.2,0.6,0.7]

x2=[0.5,0.4,0.5,0.3]

y=[1,2,3,4]

plot,x1,y,xran=[0.,0.8]

oplot,x2,y

In this, two plots are intersection at one point, how to find out that particular intersection x and y value.

Thanking you,

Kishore
