Howdy folks.

Say I have the following array: [1, 2, 3, 4, 7, 8, 11, 13, 14, 17, 18, 19]

How would I tell IDL to go through this array and return the array [4, 2, 1, 2, 3].....the lengths of the continuous groups of numbers in the array?

Thanks!
