Hi guys,

FL 0.71 is available at <http://web.interware.hu/fl>

The main new feature is support for dynamically loadable modules on linux.

There are two example DLMs on the website:

- a function interface to the CXFORM coordinate transformation package
- an object interface to the FFMPEG library for video input/output

Enjoy!

regards,
lajos

I am really impressed that fl is about 50% faster than idl with the standard time_test code. Thanks for the hard work!
