Dear experts,

following problem: I have a number of point and I visualize them in a plot with crosses as psym. So it looks like a "cloud of crosses", now. So it would be far nicer if i could show a number for each cross on the plot. So I can trace certain values back. Up to now I see only the way to create numbers with usersym, which is very time consuming. Is there a smarter way to do it?

Best regards,

thomas
