Folks

Hi

I have some images with .rrd format (one image consist of 3 file: rrd +aux+dt2). Does any one have experience with this kind of data, that how we can import it to IDL (or ENVI)?

Any help?

Cheers

Dave

I found this: <http://tinyurl.com/5kujdn> It might help - you might have to build your own.

This is Elevation Data no?

dt2: Digital Terrain Elevation Data (level2)

rrd: Reduced Resolution Dataset (pyramid file which helps the image display faster)

aux: Auxiliary file (color map, coordinate system, projection info,...)

This might help to decode the dt2 file:

<http://en.wikipedia.org/wiki/DTED>

<http://www.nga.mil/ast/fm/acq/89020B.pdf>

For the aux file, I don't know:

<http://tinyurl.com/5unxyj>

I don't think the rrd file is obligatory (but I'm not a specialist).

it is not. I believe it is only used in ArcGis...

Jean
