
Subject: Matching Lats and Lons from two arrays
Posted by [wilsona](#) on Tue, 26 Aug 2008 15:47:02 GMT

I have 2 separate arrays of Latitudes and Longitudes.
CS_LATLON(0,4607) is one latitude array and dlat(192,139) is the other
CS_LATLON(1,4607) is one longitude array and dlon(192,139) is the other.
I want to index through each element in both CS_LATLON arrays and find
which point(s) in the dlat and dlong arrays are closest.
I tried using nested loops but that gave me 12 million+ loops which is
too many for my liking. I now am trying search2d
NUM_PNTS = N_ELEMENTS(CS_LATLON(0, *)) - 1

```
FOR J = 0, NUM_PNTS DO BEGIN
  CLOSE_LATS = SEARCH2D(dlat, 0, 0, CS_LATLON(0,J),
CS_LATLON(0,J), INCREASE=0.5, $
    DECREASE=0.5)
  lat1 = CS_LATLON(0,J) * PI / 180.0
  FOR K = 0, CLOSE_LATS DO BEGIN
    lat2 = dlat(K) * PI / 180.0
    d_long = CS_LATLON(1,J) - dlon(K) * PI / 180.0
    DISTANCE = 10800.0 / PI * acos(sin(lat1) * sin(lat2)
+
cos(lat1) *    $
    cos(lat2) * cos(d_long))
  ENDFOR ; K
ENDFOR ; J
```

This is not working the way I would like. Any suggestions on this would be greatly appreciated.
