Subject: Passing Batch File Names

Hey everyone,

I have a code that calls a batch file to assign variables that I want the main level program to have. The names of the variables and the number may change randomly, and not by me, so I didn't want to use a procedure where I would have to change it every time an alteration was made in the save file.

Now, I need to execute a batch file whose name is passed by another program. I've used `call_method`, `call_procedure`, and `call_function`, but I see nothing like `call_batch`.

My current fix is the following:

```
spawn, 'cp ' + in_name+' temp_name.pro'
```

```
@temp_name.pro
```

This doesn't seem very clean, but it makes all of the variables available to the main level.

Any brighter ideas?
