Hi guys,

I have created C functions for IDL and it uses .pro files to call them

I want to package them into an DLM. So far I see that DLMS use shareable libraries. I don't see the possibility of including the .pro file into the DLM. Am I right?

Thanks  
Zaki

Seeing as no one else is taking this. My understanding is that what you are suggesting is not possible. Any .pro would need to be rewritten in C as part of the DLM methinks.

Yes, this looks like something that RSI could improve on. I like having a .pro call the shared library because the .pro can simplify some of the mundane tasks that would take many lines of code in C. Anyway, I'll distribute it as a folder that requires PATH and PATH\_DLM set for it to work.

Thanks for replying Russell

Regards  
Zaki
