Subject: calculate correlation coefficient considering the significant level Posted by Nick[1] on Sat, 18 Oct 2008 12:40:37 GMT

Hi, all

I want to calculate correlation coefficient between A group data and B group data

I know there is a function - CORRELATE.

However, among whole data, I just want to use the data within the significant level 0.05.

If you have any good idea or tools?

Thank you, Mok
