Hello everybody,

i am trying to position a popup widget relative to an already existing gui. Is there a way to get the absolute position of the underlying parent widget on the screen. The problem is that i dont have a reference of the parent widget. Is there a way to get access to the positions of all the currently active widgets.

Cheers

Andi

Not to my knowledge. But when do you need to position the popup widget relative to its parent? Only on creation? And where is this popup widget created? In an event-handler of the main TLB-widget?
