Folks,

Whoa!! I gotta have one of these!

I finally got my youngest to give up his Mac for a couple of hours so I could install IDL and check out of couple of things. Looks like my TLB resize problem is working well here. :-)

I have a question for Mac users. What in the world to you do for a three-button mouse!? I can zoom in, but I sure as heck can't figure out how to zoom out. :-(

Do I need to re-write all my code for a one-button mouse?

Cheers,

David

You can turn on three-button mouse emulation in X11 Preferences.
