Hi,

does anyone use the libraries from
<http://ncas-cms.nerc.ac.uk/content/view/94/122/> ?

I'm trying to make some PostScript contour-plots. The plots in the
ps-file are always wrong orientated which is quite annoying.

Take the ex1.pro as example.

Anybody know's with parameters psopen need's to make landscape-plots
which can be opened with gv or included in TeX without having to rotate
them?

Regards

Bernhard

noone here.

That bug report or feature request has become a high vote over the last 20 "idl" years.

It seems not to be worth to become implemented for a customer.
