Well, there is a part in the IDL help called "Overview of Warping
Images". Check out e.g. WARP_TRI.

I had a web page that did this a long time ago. My previous employer
has long since removed them.

However, these pages have been archived by WayBackMachine.

I provided notes for six different ways to warp images in IDL.

You can find them here ...

Thank all of you . I've warped the image by the steps in IDL help. But
the result is wrong (Details in my former topic:http://groups.google.com/group/comp.lang.idl-pvwave/browse_thread/thread/ce0b40aec29ca7f8). I'll learn your methods in the website. I've
checked dfanning's but found nothing useful about my question.
Fortunately this site comes out. Great!
Best wishes...
