Dunno about doing this in eclipse, but one could do something like

```
cvs update -f -D date files....
```

on the command line. The CVS manual describes the various date formats accepted.

cheers,

paulv

Thanks for your input.

I have found an alternative way. In my linux system I typed:

```
$ grep "Oct" Entries    on a command shell in related CVS directory.
```

I got a list of files and manually restored those files by following  
restore with / History right click menu.
