All,

Solution should be easy but I couldn't figure out and couldn't find
the solution in the user forum. I would appreciate any help.

I have been using the read_grib.pro scripts of Andy Pursch (over
ittvis user community downloads). For the past year I didn't have
problem running it under IDL 6.3. Since the read_grib package contains
5 scripts, I have been compiling each script via "resolve_routine"
commend before calling "read_grib.pro" in my scripts.

So far, I didn't have any problem, but when I tried to run the same
script under IDL7.0 I had an error saying

Stat = IDL_GRIB(file, Count = LCount)
                    ^
% Syntax error.
  At: /home/usr/bin/read_grib.pro, Line 612

    Stat = IDL_GRIB(File, Image, Dump = GetRecords[I], $
                        ^
% Syntax error.
  At: /home/usr/bin/read_grib.pro, Line 631
% Compiled module: READ_GRIB.
% Attempt to call undefined procedure/function: 'READ_GRIB'.
% Execution halted at: $MAIN$ 96 /home/usr/bin/
read_the_grib_file.pro

And when I run the same script under IDL 6.3, (without editing a dot),
it runs without any problem.
Could anyone possibly help me what would be the reason?

Cheers,
Ray
