It seems for me that the pwidget program doesn't work in widget application. When I running it, there are always some errors like:

```
% CONVERT_COORD: Data coordinate system not established.  
% Execution halted at PWIDGET_EVENTS </usr/local/idl/lib/graphics/pwidget.pro( 466)>
```

or

```
% ROUTINE_NAMES: Variable is undefined: XX.  
% Execution halted at PW_REDRAW </usr/local/idl/lib/graphics/pwidget.pro( 56)>  
(ROUTINE_NAMES).
```

I called it by:  
pwidget, x,y , group=event.top

Someone help me.
