Are you an idiot?!

:-)

file ='filename' open, ch, file, /get_lun

; write to unit ch

free_lun, ch

Thats as funny as my code gets.

When I try to compile that I get:

free_lun, ch

% No such thing.

Several years ago, when Dave Burridge and I were collaborating on the Catalyst Library, we worked on it about 24 hours a day, as he was in England and about 8 hours ahead of me. He would work on it, turn it over to me when he went to supper and I had finished breakfast, and I would turn it back over to him

when I was finished answering all my IDL newsgroup e-mail, about 7 AM his time, when he would start in on it again.

Sometimes we would pass a number of files back and forth. One day, I managed to conceal an a DLL that played wav files, and I modified the error handler to play a short clip of Moe, one of the the Three Stooges, yelling "No, no, no, you're doing it all wrong!!" when an error occurred. That had us amused for quite some time. :-)

If you have a Windows machine, you can download the WAV DLL file and the allwrong.wav sound file (among others) here:

http://www.dfanning.com/programs/bell.zip

I wrote it for IDL 5.5, but I just installed it on my IDL 7 Windows machine and it still works, and still gives me a smile. :-)

Cheers.

David
