Hi,
just a though... are you sure you need the double \\?

Jean

The older version might have problems with spaces in the path, you
could try to install in "c:\rsi\..."

I've been using spaces in the path since well before 6.0 with no problems.

Neil,
have you tried simply pasting the license text in a text file, naming it license.dat and copying this into the rsi license directory? You really do not need the wizzard if you are one yourself. :-)

Cheers,
Haje

Clearly flexlm doesn't like vista. I doubt that 6.0 is supported under vista and you may be out of luck. Some ideas:

Do you have "fast user switching" (or whatever it is called in vista) enabled? Can it be disabled as it can in XP?

Contact tech support and see if they can generate a license file that allows for Terminal Server remote clients (this is an option with at least some flexlm licensed products).

Run XP and IDL 6.0 in a virtual machine on your vista PC.

Install XP on your PC.

Update IDL to a version that is supported in vista.

Not very helpful, I know...

Thank you for your comments. Having looked a little closer it's not the double // that's the problem, i installed in a directory with no spaces in the path and that didnt work, and i just copied the file into the expected directory space (ie not using the licence wizard) and that didnt work either.

As Rick says it's maybe something to do with the compatibility between Wista and FLEXlm.

thanks, neil

Hey man,
I am trying to run a program that needs flexlm too on Vista and I got the same error message.
Note that: I downloaded the newest version of flexlm that is already working with one of my programs.
The problem is not flexlm.

I think the problem is the license format. The license I experiencing the problem with doesn't have server and daemon lines.
When I manage to add them, the flexlm work correctly but the application says it can't find a license (He gives me a list of all available licenses and say he can't find one. Really nice!!!).

I am not giving a solution I just want to say, it is NOT flexlm.
We have to search for other solution.
