Subject: IDL 6.0 under MS Vista operating system Posted by 2d on Mon, 08 Dec 2008 16:02:39 GMT

View Forum Message <> Reply to Message

Migrating from an XP machine I'm trying to operate IDL 6.0 under Vista machine, under a personal (flexible) licence. In pasting in the licence text when running IDL licence into the required box i get the following error message:

% LICENSE MANAGER: Terminal Server remote client not allowed Feature: idl

 $\label{license-license-license} \label{license-licen$

Files\RSI\\license*.lic

FLEXIm error: -103,577. System Error: 2 ""

For further information, refer to the FLEXIm End User Manual, available at "www.globetrotter.com"..

License file: C:\Program Files\RSI\\license\license.dat:C:\Program Files\RSI\\license*.lic

The directory/file into which the licence is pasted is exactly the same as in the XP version and the text is exactly the same. However, for some reason i'm getting this error. Anyone any ideas about what i need to do to make this work in Vista?

thank you, neil
