Well, if you are talking about the new version that is
"compatible with IDL 7", I can't get it to run in IDL 7
either. :-(

It seems to me the save file has the module RunFromIDL
inside it. But since we are trying to restore the file
from within RunFromIDL it won't allow us to do that.

But, even if I CD to the revolution directory and
restore the file myself, then type "revolutionIDL"
absolutely nothing happens.

I really don't know...

Cheers,

David

Nor does the RevolutionIDL.sav file run if I drag it over to the IDL Virtual Machine.

I think something is wrong with this distribution. I'd love to hear from Eduardo about this, because this is the neatest IDL application I have ever seen.

Cheers,

David

David,

Whew. At least I'm not the only one --

Is it just me, or does anyone else think that 'runFromIDL' sounds like a hidden message?
chris

Once I ran to you

Now I'll run from you ...

A new version has been posted to the IDL download site and it works.

Thanks Eduardo!
