After installing every
libstdc++xx-devel package it works now.

I have no idea which one it needs and why it doesn't tell the
dependencies itselfs.

At some point it may become easier to build a deb or rpm package for
ittvis instead of getting all these requests.

cheers
Reimar

I have the same problems on my new Fedora 10
(2.6.27.7-134.fc10.i686.PAE #1)

I have never managed to have a successful IDL 7 installation on these
Linux machines. There is always some problems occur. Either display
driver issues, or Java errors, or something else.

Please let us know if you get any progress.

Hi,

```
/usr/local/itt/idl/idlde/bin.linux.x86> ldd libidl_dml.so
linux-gate.so.1 => (0xffffe000)
librt.so.1 => /lib/librt.so.1 (0xf7f9d000)
libpthread.so.0 => /lib/libpthread.so.0 (0xf7f86000)
libidl_bml.so => not found
libstdc++.so.5 => /usr/lib/libstdc++.so.5 (0xf7ec5000)
libm.so.6 => /lib/libm.so.6 (0xf7e9f000)
libgcc_s.so.1 => /usr/local/gcc-4.2/lib/libgcc_s.so.1 (0xf7e93000)
libc.so.6 => /lib/libc.so.6 (0xf7d60000)
/lib/ld-linux.so.2 (0x56555000)
```

Have you installed libstdc++.so.5?

regards,
lajos

now I have it and no idea if it was the one which was missing.
I have some more systems to upgrade so I can determine this later.

the solution in my case was to install every libstdc++xx-devel package

cheers
Reimar

Yes, I find the same solution as well right after googling for "failed to load idl_jdml"

and installed compat-libstdc++ which includes libstdc++5 file.

Now the workbench it is up and running.
