Has anyone ever verified whether IDL 3.6.1a and Solaris 2.4 works
fine together ?
I've cheched some programs I've written, and it is OK, but it isn't
totally relevant. Has anyone tried further such a thing ?

Thanks in advance.

E.G.

We've not had any problems here with 3.6.1c and 2.4 (at least no new ones
vs. Solaris 2.3 and IDL 3.1). That includes use of a couple of moderately
heavy packages which probably between them use most of the major features.
