I followed the instruction to update on the ITT website.

When the Update Sites to Visit dialog appears, I selected "ITT Visual Information Solutions".

But on the next step, it didn't find the available updates about 7.0.3 stated in the instruction.

There are only some update about IDL Code Contributions and IDL Workbench Updates.

Another computer with 7.0.3 was updated in August 2008.

Is there someone who update IDL 7.0.0 to 7.0.3 recently?

I think it is the Workbench you are trying to update. There haven't really been any changes to IDL since about 1954, or least it seems that way. The numbering system is totally screwy. The Workbench version and the IDL version, although they both use 7.x.xx as a numbering scheme, don't (this is the way it was explained to me) have anything to do with each other. Go figure. :-(

Cheers,

David

Now I am using 7.0.3 on my notebook.
There are some improvement which I think is useful.
For example, you can use Shift+F8 to "Run Selected Text". I usually use this function.
Therefore, I want to find a way to upgrade IDL on my desktop to 7.0.3.

It costs a long time to analyze the code when I open the workbench
7.0.0.

The cpu is 100% for more than ten minutes. It's said that workbench
7.0.3

can accelerate the analyzing speed. But I can't update it now.

David you are wrong

unfortunately they have ported the useful batch processing library
to windows and converted each tool into an interactive one.

Now your software works only if a human person is sitting in front of it. ;)

cheers

Reimar
